Applicant's election of group I and the species shown in FIG. 1b in the reply filed on 12-16-09 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

Claim 34 is objected to because of the following informalities: on line 2 of claim 34, "perorated" should be changed to --perforated--. Appropriate correction is required.

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 37 and 39 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

On line 2 of claim 37, "said moving step" lacks antecedent basis.

Regarding lines 1-2 of claim 39, it is unclear as to how the purge fluid is passed through the outer perforated cylinder since no step for passing the fluid radially outwardly through the outer perforated cylinder has been recited in the claim.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 26 is rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Patent 6,322,704 to Martin.

With respect to claim 26, Martin discloses a method of operating a fluid treatment device employing a non-bonded media for treating the fluid, including the steps of: containing the non-bonded media 56 (see FIGS. 3-4) in an annular chamber located between an inner perforated cylinder 54 and an outer perforated cylinder 60 of the fluid treatment device; passing an influent radially through the non-bonded media for treatment of the influent during a treatment operation (see FIG. 3); and passing a purge fluid down an upper portion of the inner perforated cylinder during a packing operation and then outwardly into the annular chamber to pack the non-bonded media in the annular chamber (see FIG. 3 and lines 25-31 of col. 5).

Claims 27-36 and 38 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 37 and 39 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action.
